

## HYDRO REPELLENT

### PRODUCT DESCRIPTION:

#### Waterproofing agent with nano-technologies effective at low temperatures

- Waterproofing effect without using high temperatures
- Nano-technologies formula: cross-linking and waterproofing even drying at room temperature
- Waterproofing effect which resists also at subsequent washes
- Hydrophobic effect on all water based stains (such as wine, drinks etc.)
- It maintains garments breathability
- Effective on both natural and synthetic fibres
- It doesn't affect colours, leave a pleasant touch and it doesn't grease

### DIRECTION FOR USE:

Hygienfresh® Hydrorepellent has to be used in the last rinse, with a limited water level and a low spin cycle (less than 600 RPM).

1. Wash garments normally,
2. Use in the first rinse 2-3ml of Acetic Acid 24% in order to improve the waterproofing effect and eliminate detergent residues.
3. Add 10-15 ml/lit of water Hygienfresh® Hydrorepellent in the last rinse. In case of very absorbent garments (such as sponges or cotton) slightly increase the dosage of +3-5ml/lit.
4. Centrifuge at low speed, less than 600 RPM.

Dry at room temperature or in the dryer (avoid temperatures higher than 120°C). By using a dryer and increasing the drying temperature, you will promote the cross-linking and you will increase the hydro-repellent effect. Do not use Hygienfresh® HydroRepellent with a spray or with nebulizers.

**Product for professional use only.**

### LOGISTIC INFORMATION:

Code	Size	Box	Pallet
A48-505H2	5 Kg	2	64

**STORAGE:** Keep the product in its original packaging at a temperature between 10 and 35 ° C and avoid any leakage of product. Avoid bitter cold and freezing. Do not expose to direct sunlight. It is advisable to preferably use the product within 18 months from production. For further information read the safety data sheet (SDS).

All the instructions provided are the result of studies and experiences acquired and they do not exempt the client from verifying the suitability of the products for the purposes of use.
