

NEW SINGLE DOSE

HygienFresh

Emulsene

Spotting agent - Additive

ENZYMATIC STAIN REMOVER

EMULSENE Spotting agent - Additive is an enzymatic stain remover which can be used on garments such as cotton and polyester.

It uses the power of a rich complex of **enzymes**: protease (for protein stains), lipase (for grease stains), amylase (for starch stains) and cellulase to restore fibres.

It contains a high percentage of **non-ionic surfactants** to easily remove grease stains from garments and avoid the new deposition of dirt which can make garments darker.

Emulsene is a **powerful spotting agent, delicate on garments**.

Thanks to its **pH 9** and to the colour transfer inhibitors, it maintains colour brightness and protects fibres. It has an excellent **fresh lemon and orange fragrance**.

HOW TO USE:

Use in the washing machine: Pour the content of the sachet into the appropriate compartment along with the detergent. Dosage for 8/13kg of garments.

Direct use: Pour the product directly onto the stain. Put the garment in the washing machine. Test the product before on a hidden part of the garment.

CODE A48-612

PACKAGING 150x50ml

The HygienFresh single doses are ideal to supply the **VENDING MACHINES** of Self-Service laundries or as **COURTESY LINE** for hotels.
